

Minimize Foil Waste

The DGM Foildex system from Diversified Graphic Machinery (Booth 258) allows companies to use cold foil efficiently and profitably by minimizing foil waste and bringing foil cost for cold foil applications to hot foil levels. With large area coverage and miniscule reverse out, the system gives a new dimension to print enhancement. Coupled with the ability to produce holographic images with the DGM Filmdex UV film Cast and Cure inline with cold foil and print, gives packaging printers a powerful sales tool and a unique niche in the marketplace.
