

DGM Sponsors Cold Foil Innovations Summit

Diversified Graphic Machinery (Booth 867) sponsored a well-attended Cold Foil Innovations Summit this summer at DGM's manufacturing facility in Turin, Italy.

Cold Foil was the topic at the Innovations Summit, which attracted participants from Germany, Denmark, England, Switzerland, Italy, and the United States. ITW Foils, Colorgraph, and Diversified Graphic Machinery presented a number of new cold foil products and technologies during the 3-day Summit.

"The Innovations Summit was an excellent opportunity to have both suppliers and customers come together and see what's new with the cold foil process," says Michael DeBard, President, Diversified Graphic Machinery.

"A hot topic at the summit was Indexing and how Foildex® technology allows you to save foil in the running direction of the sheet," added DeBard.

DGM also announced that a UV Casting Innovations Summit is planned for fall 2014 at DGM after GRAPH EXPO that will focus on UV Cast and Cure™ with discussions on LED UV lamps vs. standard UV lamps and their respective benefits. Also a round table discussion will be open for customers with the release of the latest cold foil technology.
