To whom it may concern,

The company EGISA - located in Barcelona – Spain, is the leader in the Spanish Luxury Packaging market. Founded in 1964, Egisa has the strategy of being very innovating by investing in the latest technologies and offering its customers state of the art folding cartons.

With a manpower of more than 150 people, EGISA has integrated all the aspects of production from Prepress, to Press and Post press. It is also offering its customers personalized services such as help in the design of innovative packagings and technical assistance .

One of the key success factors of the company is the constant search for productivity improvements. In order to be the most productive company in its field, Egisa follows a constant investment program and regularly tests and buys equipment which allows the company to improve its productivity.

One such equipment was the Die Co Ordinator of the company Insight Graphic which is an equipment designed to reduce the make ready time of the foil stamping, embossing and die cutting equipments. This equipment was tested in 2006 and the very positive test results have convinced EGISA to immediately purchase the equipment.

The equipment purchased is a special format of 102 x 142cm which fits the presses from the format 52x72 cm to 102 x 142 cm operated by the company.

The Die Co Ordinator has now been in operation for more than 7 years in a 2 shift operation. We estimate the average savings to more than 2000 working hours per year for machines with an hourly operation cost ranging from 80 to 120 €.

The Die CO Ordinator has therefore been one of the equipments of the company with the best R.O.I (in less than a year) and is contributing to the success of our company.

In addition to using Die Co Ordinator we have also been using during the last years Foil Connect, the digital optimization workflow developed by Insight Graphics with excellent results.

In order to receive more information, please feel free to contact me.

Yours sincerely,

Carlos LABORI.
